

Anti-human beta-amyloid 1-12 mAb 2C7

Description:

A β peptides, generated from amyloid precursor protein (APP), are produced in all healthy tissues and may regulate synaptic activity, neural plasticity, and microbial defense in the CNS. In Alzheimer's disease, however, A β accumulates and aggregates into amyloid plaques in memory- and cognition-related brain regions. The "amyloid cascade hypothesis" proposes that disease arises from imbalances in A β production, aggregation, and clearance. While age and genetic mutations contribute, the precise mechanisms are not yet understood.

The clone 2C7 is a Monoclonal Mouse antibody against Human B-amyloid 1-12, Beta-Amyloid, Amyloid-Beta (Uniprot: P05067 · A4, amyloid-beta precursor protein).

The antibody is produced exclusively from hybridoma and purified through one-step purification with Protein-A affinity chromatography.

Product-ID:	INV4000062
Clone:	2C7
Immunogen:	Animals were immunized with Synthetic peptide DAEFRHDSGYEV
Host:	Mouse
Clonality:	Monoclonal
Isotype:	IgG1k
Formulation:	Clear Liquid, PBS, pH 7.4
Concentration:	> 1.0 mg/ml
Purity:	> 95% by SDS-PAGE
Sizes available:	0.1 mg and 1.0 mg
Storage:	at - 20 °C (repeated thawing and freezing should be avoided)
Tested application(s):	ELISA, Western Blot, Immunohistochemistry

The product is for research use only and not for use in diagnostic or therapeutic procedures.
